

Rytec® Introduces Spiral® LP Low-Profile High-Performance Door

RYTEC CORPORATION introduced a new addition to its Spiral® product line—the Spiral® LP. Combining a low-profile side column and headroom configuration, the Spiral LP features a reduced profile allowing it to fit into even tighter spaces than other models. With side columns requiring only 6.5 inches of side room clearance, the Spiral LP provides a solution for commercial applications challenged with extremely limited space. As a result, high-performance door operation is now assured in locations where conventional sectional and rolling steel doors typically have been used.

Standard features include double-walled anodized aluminum slats, integral rubber weatherseals and a continuous heavy-duty hinge system, providing a tight seal and resilience to inclement weather conditions. The variable speed AC drive system—with soft acceleration and deceleration—provides unparalleled performance.

The Spiral LP is ideal for parking, automotive, commercial, institutional and residential applications, and is also available in models designed with 9-inch tall full-vision or full-ventilation slats.

With another innovative high-performance door, Rytec continues to better serve the needs of its customers.

Hanwha L Series Cameras Supported by Genetec Stratocast Cloud-based VMS

HANWHA TECHWIN AMERICA, a global supplier of IP and analog video surveillance solutions, announced that Hanwha's Wisenet™ L series cameras are now compatible with the Genetec Stratocast™ cloud-based video surveillance-as-a-service (VSaaS).

Through this technology partnership, customers across a broad range of industries will now be able to reap the benefits of an easy to install true-cloud solution whether they want to support hybrid-cloud deployments, add new cameras in remote locations, or serve the needs of small and mid-sized installations in a cost-effective way.

Stratocast requires no software installation, port forwarding or network setup, allowing organizations to significantly reduce installation and on-going maintenance costs, making it an ideal solution for sites where IT staff, resources, and budget are limited.

To make the enrolment process easier than ever before, customers can simply scan a QR code to bring L series cameras into the Stratocast portal in one simple step instead of logging into multiple webpages.

"We are pleased that Hanwha is first to market with a Stratocast-ready QR code enrollment option," says Oktay Yildiz, product line manager for Genetec Stratocast. "At Genetec, we believe strongly in building a network of trusted partners that have our customers' cybersecurity best interests at heart. By extending our deep strategic partnership with Hanwha into the cloud, we are offering a solution that is cyber secure, cost-effective and easy to install."

The L series consists of affordable cameras with essential features ideally suited for the needs of small and mid-size installations. The broad lineup includes fixed and varifocal lens, and bullet, dome and vandal-resistant dome cameras that are designed for both indoor and outdoor use.

"With the L series now Stratocast-ready, and other camera families soon to follow, we will be offering our joint customers a comprehensive line-up of video surveillance solutions, that satisfy the needs of projects across a wide range of market sectors, from small/medium businesses and retail chains to city-wide surveillance," says Ray Cooke, vice president, products, solutions and integrations at Hanwha Techwin America.
